### JDL100 100A 600V Class J Time Delay Fuse Edison Fuses

| Description  Class J Time Delay Fuses 600V 100A - Class G Time Delay Fuses 600V Are Ideal For Fluorescent Fixture Protection.Class J Time Delay Fuses 600V 100A Features Include:Dual-Element, Time-Delay - 10 Seconds (Minimum) At 500% Rated Currentir: 200KA RMS Sym. 300KA RMS Sym. (Self Certified)Long Time-Delay Minimizes Needless Fuse Openings Due to Tempor Overloadscan Often Be Sized For Back-Up Protection Against Motor Burnout From Overload or Single-Phasing If Other Overload Protective Devices Failhigh Interrupti  Weight per unit 0.3200 (lbs/each) Product Category Dual Element  Features  amps 100 Fuse Type Class J Time Delay Fuses Voltage 600V  Descriptions Description 100A 600V CLASS J TIME DELAY FUSE extra long description MOR T626-JDL100 Class J Time Delay Features Edison's UL Class J fuse products are offered in both |          |

| Dual-Element Time-Delay (JDL) and Fast-Acting (JFL) types. Bot types have 200,000 amp interrupting rating at 600Vac RMS Syr amps. Their small physical size and high performance characteristics makes Class J fuses ideal for any space-limited applications. Edison's JFL fuses are best suited for the protection of non-inductive loads such as resistive heating and lighting circuits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | m<br>on  |
| Long Description  Class J Time Delay Fuses 600V 100A - Class G Time Delay Fuses 600V are ideal for fluorescent fixture protection. Class J Time Delay Fuses 600V 100A features include: Dual-Element, Time-Delay - 10 seconds (minimum) at 500% rated currentIR: 200kA RMS Sym. 300kA RMS Sym. (self certified)Long time-del minimizes needless fuse openings due to temporary overloadsCan often be sized for back-up protection against motor burnout from overload or single-phasing if other overload protective devices failHigh interrupti                                                                                                                                                                                                                                                                                                                   | ay<br>ad |
