

1. Turn power off.
2. Pull 1/4 wires through box.
3. Mount box to surface using mounting lugs provided.
4. Place a bead of caulk around the base of the box if mounting to an irregular surface.
5. Install fittings in remaining threaded openings.
6. Attach Flange to cover.
7. Attach the white (neutral) wire to the silver "N" terminal.
8. Attach the black (hot) wire to the "Y" terminal.
9. Attach the red wire to the "X" terminal.
10. Attach the green (ground) wire to the green "G" terminal.
11. Fasten cover to box with the four screws provided.

CAUTION:

1. Use only copper wire.
2. **Wiring and installation must comply with local and national electrical codes.**
3. **DIRECT CONNECTION OF GENERATOR CURRENT AND LINE CURRENT COULD RESULT IN FIRE OR EXPLOSION. GENERATOR CURRENT AND LINE CURRENT MUST BE KEPT ISOLATED FROM EACH OTHER.**
4. **TO PREVENT FIRE HAZARDS AND OTHER DAMAGE, ALL ELECTRICAL WIRING, SOCKETS AND PLUGS MUST BE RATED TO HANDLE THE CURRENT AND VOLTAGE OF THE GENERATOR.**
